

PRIEO API Reference

Complete documentation for all available REST API routes. Base URL:

<https://pripeo.com/wp-json/pripeo/v1>

Required header on all requests: X-Pripeo-Key: pk_your_api_key

1. Card payment

1.1 Create a payment

POST /paiement/creer

Body parameters (JSON):

Parameter	Type	Required	Description
montant	integer	■ Yes	Amount in cents (e.g. 4999 = €49.99)
devise	string	■ No	ISO 4217 currency. Default: eur
reference	string	■ No	Order reference. Auto-generated if empty (PRIP-XXXXXXXX)
description	string	■ No	Free transaction description
client_nom	string	■ No	Full name of the paying customer
client_email	string	■ No	Email of the paying customer

Success response (200):

Field	Type	Description
payment_id	string	Unique payment identifier
client_secret	string	Secret to confirm via Stripe.js client-side
transaction_id	integer	Internal PRIPEO ID
montant_total	integer	Amount in cents
commission_pripeo	integer	PRIPEO commission in cents
devise	string	Currency used
statut	string	en_attente (payment not yet confirmed)

1.2 Issue a refund

POST /remboursement

Parameter	Type	Required	Description
payment_id	string	■ Yes	payment_id received when creating the payment
montant	integer	■ No	Amount to refund in cents. If absent: full refund
raison	string	■ No	requested_by_customer · fraudulent · duplicate

Field	Type	Description
refund_id	string	Stripe refund identifier
montant_rembourse	integer	Refunded amount in cents
statut	string	reussi (successful)
payment_id	string	Related payment_id

1.3 Transaction status

GET /transaction/{payment_id}

Replace {payment_id} with the payment_id received when creating the payment.

Field	Type	Description
id	integer	Internal PRIPEO ID
payment_id	string	Stripe payment identifier
montant_total	integer	Gross amount in cents
commission_pripeo	integer	PRIPEO commission in cents
montant_marchand	integer	Net amount credited in cents
devis	string	ISO 4217 currency
statut	string	en_attente · reussi · echoue · rembourser
reference_commande	string	Order reference
client_nom	string	Customer name
client_email	string	Customer email
date_creation	datetime	Creation date (Y-m-d H:i:s)

1.4 List transactions

GET /transactions

Optional URL parameters:

Parameter	Type	Required	Description
page	integer	■ No	Page number. Default: 1
limite	integer	■ No	Results per page. Max: 100. Default: 20

1.5 Confirmation webhook

POST /webhook/paiement

This endpoint is called automatically by Stripe when a payment is confirmed. You do not call it directly — configure the URL in your Stripe dashboard → Developers → Webhooks.

Listened events: [payment_intent.succeeded](#) · [payment_intent.payment_failed](#) · [charge.refunded](#)

2. PayPal

2.1 Create a PayPal order

POST /paypal/creer-commande

Parameter	Type	Required	Description
montant	integer	■ Yes	Amount in cents
devise	string	■ No	ISO 4217 currency in UPPERCASE. Default: EUR
reference	string	■ No	Order reference. Auto-generated if empty
description	string	■ No	Transaction description
client_nom	string	■ No	Customer name
client_email	string	■ No	Customer email
url_retour	string	■ No	Return URL after PayPal approval
url_annuler	string	■ No	URL if customer cancels

Field	Type	Description
order_id	string	PayPal order identifier
lien_approbation	string	URL to redirect customer to for approval
transaction_id	integer	Internal PRIPEO ID
montant_total	integer	Amount in cents
commission_pripeo	integer	Commission in cents

2.2 Capture the payment

POST /paypal/capturer

After the customer approved the payment on PayPal, call this route to capture the funds.

Parameter	Type	Required	Description
order_id	string	■ Yes	order_id received when creating the order

Field	Type	Description
order_id	string	PayPal order identifier
capture_id	string	PayPal capture identifier
statut	string	reussi if capture succeeded
message	string	Confirmation message

2.3 List PayPal transactions

GET /paypal/transactions

Same optional parameters as /transactions (page, limite).

3. Merchant dashboard

These routes require a WordPress login (active session). They are used by the merchant dashboard [prideo_dashboard].

3.1 My balance

GET /mon-solde

Field	Type	Description
solde_disponible	integer	Available card balance in cents
solde_paypal_disponible	integer	Available PayPal balance in cents
total_encaisse	integer	Total card amount received in cents
total_paypal_encaisse	integer	Total PayPal amount received in cents
total_retire	integer	Total withdrawn in cents
commission_pct	float	Card commission rate

commission_paypal_pct	float	PayPal commission rate
-----------------------	-------	------------------------

3.2 Request a withdrawal

POST	/retrait/demander
-------------	-------------------

Parameter	Type	Required	Description
montant	integer	■ Yes	Amount to withdraw in cents (min: 100)
pays	string	■ Yes	Country code (e.g. MG, SN, KE)
indicatif_pays	string	■ Yes	Phone code (e.g. MG +261)
numero_telephone	string	■ Yes	Mobile Money number without country code

4. Error codes

Code HTTP	succes	Case
200	true	Success
400	false	Missing or invalid parameter
401	false	Missing or invalid API key
404	false	Transaction or resource not found
500	false	PRIPEO server error

Format of all responses:

```
{ "succes": true|false, "horodatage": "2026-08-08T...", "donnees": { ... } }
```
